

1 HOTEL BROOKLYN BRIDGE

Interior Room Dividers and Eco-Wall Cladding
Brooklyn, New York, USA

I-21

L-85

The newly opened 1 Hotel Brooklyn Bridge in Brooklyn's iconic Dumbo neighborhood features a touch of greenery in the guest rooms and public spaces, bringing the outdoors inside.

Banker Wire's I-21 woven wire mesh, which is powder-coated in black, helped transform the vertical green wall into a living work of art by providing a grid to affix the welded baskets to. AgroSci chose the intercrimp motif, commonly seen in urban-inspired window guards and fire escapes, to give the impression that plants were "reclaiming" the location using steel as a main element.

Inside the rooms, L-85 was used and interior space dividers and as decorative furniture accents above the beds. The structural and industrial nature of L-85 plays well with the natural elements of the rooms. With a large percent open area, the L-85 wire mesh pattern is well suited for this application, allowing for separation but still the ability to see the rest of the room and the walls behind it.
