HATTON
GARDEN

Hatton Garden is a well-known commercial area in the Holborn district of London. Historically, this area is famous for being London's jewelry quarter and the center of UK diamond trade. It's an area with a foundation of luxury and sophistication.

The Minerva House, 26 Hatton Garden, is a seven story period building that underwent extensive renovations beginning in 2016. It houses multiple businesses, including a co-working space. The aesthetic requirements were simple, elegant, but a design that was full of character.

Banker Wire's Antique Brass plated LPZ-71 clads the elevator shaft at Minerva House. The LPZ-71 fine woven wire mesh is a perfect balance of wire diameter and spacing. It shields the interesting mechanical workings of the elevator but also allows glimpses of it at certain angles; this creates a unique, contemporary industrial feel to the space. The elegance added by the decorative plating secondary finish in Antique Brass brings a classic touch to the design, an homage to the building's rich history.
