

ONE YORK STREET

Elevator Cladding
Toronto, Ontario, Canada

DS-55

In Toronto's South Core Business District, One York Street is an impressive Class 'AAA' office tower that boasts multiple offices as well as retail stores and restaurants. The large banks of elevators located inside One York Street use Banker Wire's DS-55 in stainless steel as cladding on the interior of the elevator cabs.

DS-55 is an opaque wove wire mesh pattern with a single flat cross wire repeat, giving a relatively flat and smooth yet textured appearance to the inside of the elevator cab. The structured appearance of DS-55 juxtaposes well with the natural marble flooring and walls in the elevator lobby area. Stainless steel's natural reflectiveness combined with the textured pattern of the opaque DS-55 gives off a soft glinting sparkle in the elevator interior.
