

BROOKFIELD INDOOR SOCCER COMPLEX

Interior Railing
Brookfield, Wisconsin USA

L-196

The Brookfield Indoor Soccer Complex is one of two indoor soccer facilities in the Milwaukee metropolitan area that utilize Banker Wire woven wire mesh for railing infill panels. Activities at BISC range from indoor soccer, lacrosse, football, and strength training; it is also the official practice facility of the Milwaukee Wave professional indoor soccer team.

A second floor mezzanine in BISC overlooks all activities on the three indoor soccer fields. The railing uses L-196 woven wire mesh, a large space, square lock crimp pattern. The mesh was turned on a 45 degree angle, and was welded to steel tube posts. Black wet paint finish is used to reduce viewing obstruction.
