

LEWISVILLE HIGH SCHOOL

Interior Railing
Lewisville, Texas USA

M12Z-17

Banker Wire M12Z-17 stainless steel wire mesh lines the hallways of the newly renovated Lewisville High School in Lewisville, Texas. As with most railing infill panel projects, the single most important detail is that the patterns line up. The pictures speak for themselves.

"Banker Wire metal mesh was an obvious choice for Lewisville High School. As a railing infill, the material offers unprecedented durability under the everyday abuse of high school hallways, without sacrificing aesthetic appeal," said Mark Tinwala, the owner of VIVA Railings, LLC, the fabricator for the project.
