

PEAK RESTAURANT, 30 HUDSON YARDS

Interior Space Dividers
New York, New York, USA

SPZ-52

*Shown below in bronze,
standard mill finish*

Designed by Rockwell Group, Peak, which includes the 5th floor lounge, and the 101st floor main dining room, bar, and PDRs—is defined by luxurious simplicity consistent with Rockwell Group's interiors for Edge, located directly below the restaurant. Underscored by minimalist yet warm metallic accents, a key design highlight is Peak lounge's custom decorative divider screens, created using Banker Wire's SPZ-52 wire mesh in a bronze finish. The custom screens along with the light smoked oak and soft, mirrored polished champagne metal define the elegant 5th floor lounge. A sculptural host stand, a circular stone and warm metal art piece and plush furniture round out the elevated, transporting experience of visiting Peak.

As stated by Richard Chandler, Studio Leader at Rockwell Group, in a May 2020 interview with Hospitality Design, the design team "...explored designing a space that was transformative from day to night, felt congruent with being atop of a modern 21st-century skyscraper, and was future-forward in its thinking, yet still expressed a sense of elegance, warmth, and sophistication."

The focal-point wire mesh divider screen, created using SPZ-52, was fabricated by Ferra Designs—a collaboration that epitomizes the fabricator's philosophy of 'building beautiful things' with fellow craftspeople. "Although the majority of our projects are inherently creative, the true defining factor that fortifies their legacy is the integrity of the materials incorporated," says Robert Ferraroni, President/CEO, Ferra Designs. "When the highly-acclaimed architecture firm Rockwell Group specified Banker Wire's bronze woven wire mesh to be interlaced with our metalwork, our team was excited to collaborate. Showcasing Bankers' woven mesh within our custom metalwork increased the visual value of the lounge interior."
