

SUITABLE FOR: RIPPLE, RIDGE, DRIFT, DELTA, FLOW, DUNE

LACE FLEXIBLE SYSTEM

Providing a means of tensioning the mesh, the Lace flexible mesh mounting system utilizes a perforated flat bar that matches the spiral wire pitch. The spiral mesh is linked to the flat bar and become one. Tensioners are then welded to the flat bar as a means of providing the tensile load. All materials are made form T316 stainless steel material. A Powder coated finish can be applied upon request. The Lace flexible mesh mounting system is applicable to the following mesh patterns: Ripple, Ridge, Drift, Delta, Flow, and Dune
