

ROUND THREAD

SUITABLE FOR: RIPPLE, RIDGE, DRIFT, DELTA, FLOW, AND DUNE

ROUND THREAD FLEXIBLE SYSTEM

Providing a means of tensioning the mesh, the Round Thread flexible mesh mounting system uses a rod that is inserted inside the spirals as well as equally spaced eye bolts at both the top and bottom horizontal edges. The eye bolts are therefore connected to the rod that is captured within the spiral and provides the means for applying load. All materials are made from T316 stainless steel material. A powder coated finish can be applied upon request. The Round Thread flexible mesh mounting system is applicable to the following mesh patterns: Delta, Dune, Drift, Flow, Ripple, and Ridge.
