

The **CURTAIN FLEXIBLE MESH SYSTEM** is made of a heavy-duty galvanized rail with internal carriages that allow the draped flexible wire mesh to be loosely gathered together or fully expanded. Flexible mesh attaches to the carriages by a hook through a grommet at the top of the mesh. The hooks are available in a 23 mm size. A curved configuration is possible with a minimum of a 2.5m radius. The rail can be powder coated in a variety of colors, or shipped raw. The Curtain Flexible Mesh System is suitable for **DRIFT** and **RIPPLE**.
