

SUITABLE FOR: DELTA 12R, DELTA 24RG, DRIFT, DUNE SERIES, RIDGE, RIPPLE(R)

LOOP FLEXIBLE SYSTEM

A minimalist approach to delimiting a space using the flexible mesh Loop system. Wire formation in the form of a loop allows for an integrated attachment method to a rod and eyebolt setup. The mesh configuration can either be provided along the top horizontal to allow the mesh to drape freely or, it can be provided to both the top and bottom for a more secure installation.

Information required to quote:

X - Mesh manufacturing height

or

X' - Distance between supporting structure and ground

Y - Desired length (For this type of fastening, we increased the manufacturing length by 2% to compensate for the accumulation of sag)

* All dimensions are in mm
