

The flexible metal mesh **CURTAIN** system is an elegant method of defining a space with transparent texture.

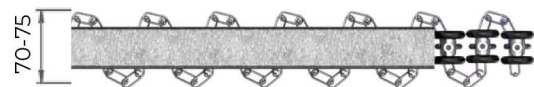

This moveable metal drapery system glides in a horizontal direction allowing a room to be opened or closed with ease. Available in either straight sections or curved sections (500mm radius limit) the mesh will follow the form of that of the top channel guide.

- A- Galvanized steel 30x30 Upper Profile
- B- Rollers with Galvanized steel Hook
- C- Eyelet (same material of mesh)
- D- Internal rail brake

Information required to quote:

- X** - Mesh manufacturing height
or
- X'** - Distance between supporting structure and ground
- Y** - Desired length (distance of the area that needs coverage).
-For undulating "Fullness" we will add 40% extra material to the **Y** dimension.
-For a flat or non-undulating appearance, we will add 8% to the **Y** dimension to compensate for the cumulative unsupported sections of the mesh.
- e***: We recommend leaving at least 25 mm

* All dimensions are in mm
